TELEPHONE ENGINEERING MEMORANDUM 527

SUBJECT: Changes or Corrections in Line Construction

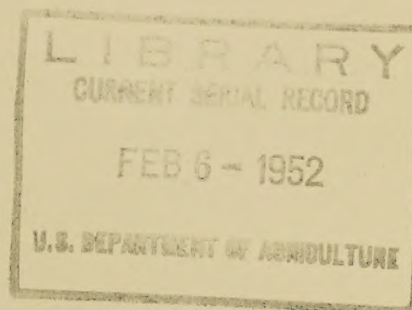

The attached Construction Order, Form DS-131R should be filled in by the borrower's engineer and the borrower and submitted to the contractor for any changes or corrections in the line whether they are to be paid for by the contractor or borrower.

Where the cost of the change is properly chargeable to the borrower four copies of this form must be made and attached to the "wash-up" Construction Contract Amendment which accompanies the Final Documents required to close out the project. This amendment brings the Construction Contract into conformity with the actual construction and is the basis for the determination of the compensation payable to the contractor. Construction contract amendments should be submitted to the REA Field Engineer for his review before transmittal to the REA.

The attached sample should be used in making additional forms for use on the project.
